

**Important:** *Please read before using.*

Old, empty feeder next to new, full feeder

**Get your hummingbirds to try a new feeder:**

Hang your OLD feeder in it's original location BUT be sure it's **EMPTY**. Hang this new feeder next to it, FILLED with *fresh* nectar. Do this even if you plan to continue using your old feeder.

**Patience is key!**

The raised feeding ports mean the nectar is further down than in your old feeder. This blocks bees & wasps so be patient while your hummingbirds discover this. Most hummingbirds switch the same day but some can take a week or more. Don't worry about your birds reaching the nectar. Their tongues are 2x longer than their beaks!

**NOTE:** For migrating hummingbirds that are just arriving:

Hummingbirds just arriving from will need to feed immediately, so have your old feeder full and waiting for them in the same location it was last year. After they've fed for a couple days, then feel free to follow the above procedure.

Over-achiever's method

**If you're feeding hummingbirds for the first time in your yard:**

**Attract hummingbirds with flowers.**

Hummingbirds see flowers from great distances. Locate the feeder close to flowers that hummingbirds like. A hanging basket of flowers, sharing a double shepherd's hook with your feeder is one of the best, and easiest, ways to attract and feed them.

# Easy to use:

## Easy Fill Option: Mix the nectar right in the feeder.

First, fill the center, built-in, ANT MOAT with clean water to block ants from getting in the feeder.

Insert the two divider grids into the two slots in the clear bowl. Then, fill the area **between the 2 dividers** with white sugar, to the top of the dividers.

Pour very **HOT**, even boiling water slowly, directly into the sugar. Pour to the top row of holes in the dividers.

The sugar will dissolve and flow through the dividers as you pour.

With the feeder flat on the counter, gently rotate it back & forth until the sugar is dissolved.

Let it cool.  
Remove dividers - or leave them in.

## Always use the BEST food for hummingbirds:

- Always use 4 parts water to 1 part sugar. Any other ratio can harm hummingbirds.
- Only use pure, **WHITE** sugar. Nothing else. **Cane** sugar is best. Cheaper, beet sugar, can gel and cause mold in your feeder.
- Never use organic, "raw", or any brownish-colored sugar. Molasses makes the sugar brown and is bad for hummingbirds. It will also turn the nectar into a science project.
- **NEVER EVER** add coloring to nectar. It's very bad for hummingbirds! Spread the word.

After the nectar is cool, place the colored lid onto the bowl.

Drop the hanger into the center hole, turn it slightly clockwise, and gently pull up. The hanger should then be in place. The weight of the feeder keeps it in place. No strength is needed. Ensure the hanger is hooked before carrying.

➔ *Carrying the feeder by the hanger is easiest and most secure to avoid sloshing.*

➔ **Rinse any nectar off the outside of the feeder so it won't attract bugs.**

**Clean & refill often.** For your hummingbirds' safety, don't allow the nectar to get polluted. Washing this feeder is super easy. Sure, it's dishwasher safe but it's so fast & easy to hand wash! It's safe to use dish soap or vinegar. Avoid heavily scented dish soaps and rinse **WELL** with **COLD** water.

Got questions? Whether it's about hummingbirds, a replacement part, or how much you love your feeder, we'd really like to hear from you. We're easy to contact:
